Re: **Addendum C** to Letter of Opposition to “Carrot” Timber Sale:  
Representative Photographs with Descriptions and Locations

This addendum provides representative photographs of the “Carrot” timber sale that support our conclusion that the forest is structurally complex. Multiple canopies of both small and large trees of various sizes, and multiple communities of forest floor plants are evident in all photographs. Gaps in the canopy have created patches of emergent shrubs and hardwoods, and allowed for the release of shade tolerant conifers such as hemlock.

Please add this information to the record for the “Carrot” timber sale.

Thank you,

Stephen Kropp  
Director

50 Inch Diameter Douglas Fir Tree

Photo Location: Unit 1

Wide Range of Tree Sizes / Large Gaps Between Trees are Indicators of a Structurally Complex Forest

Large Cedar Tree: Carrot Unit 1

48 Inch Diameter Douglas Fir Tree

Large Trees Over 4 ft in Diameter are Characteristic of Structurally Complex Forests

Example of Understory Development / Plant Species Diversity (Unit 1)

Mushrooms Growing on a Large Snag

Large 4-foot diameter Douglas Fir Tree (Unit 1)

View of Canopy Illustrates Structural and Tree Species Diversity (Unit 1)
